

CONTENTS

Definitions	5
List of Abbreviations	8
Introduction.....	9
1 Analysis of Methods and Means of Counteraction to an Operator Destructive Impact in a Distributed Computer Network.....	13
1.1 Analysis of Models and Methods of Counteraction to an AWS Operator Destructive Impact.....	13
1.2 Analysis of DCN Operator's Destructive Impact Detection Means	17
1.3 Model of the Operator's Destructive Impact Detection Multiagent System.....	22
1.4 Assignment of a Research Task	25
Conclusion	29
2 Methodology of DCN Operator's Destructive Impact Facts Detection	30
2.1 Model of Internal Threats	30
2.1.1 Classification of an Intruder Concerning Rights of Access to DCN.....	30
2.1.2 Classification of Security Threats to Critically Important Information Segment.....	31
2.1.3 Biometric Properties of an Internal Intruder.....	38
2.2 Classification of an Operator's Destructive Impact According to Properties	47
2.3 Face's Characteristic Points Detection Model	50
2.4 Development of an Operator's Destructive Impact Model on the Basis of Neural Network	55
2.5 Methodology of DCN Operator's Destructive Impact Facts Detection According to Video Information.....	62
Conclusion.....	65
3 Algorithms of Collecting and Transfer of Operator's Actions Parametres via Video Information.....	66
3.1 Data Collection Algorithm	68
3.2 Algorithm of Formalized Messages Preparation on Detected Operator's Destructive Impact.....	70
3.3 Data Transfer Algorithm	74
Conclusion	76
4 Description of a Sensor Model and Results of a DCN Operator's Destructive Impact Assessment.....	77
4.1 Structure of Special Sensor Software.....	77
4.2 Facilities of DCN Operator's Destructive Impact Identification Assessment	79
4.3 Practical Representation of the Intrusion Detection System Solution with a Biometric Sensor.....	82
4.4 Results of the Developed Sensor Use Efficiency Assessment.....	84
Conclusion	86
5 Ecological Part.....	87
5.1 Analysis of Potential Dangers, Maleficences at SW Development and Procedures of their Clearing.....	87
5.1.1 Requirements to Microclimate, Level of Air Ions and Hazardous Chemical Substances in Air	87

5.1.2	Requirements to Noise and Vibrations Levels.....	89
5.1.3	Requirements to Illumination	89
5.1.4	Requirements to Electromagnetic Fields Levels.....	90
5.1.5	Requirements to VDT Visual Parametres	91
5.1.6	Electric Safety.....	91
5.1.7	Fire Safety.....	93
5.1.8	Requirements to Organisation and Workplace Setup.....	94
5.1.9	Waste and Utilization.....	95
5.2	Workplace Illumination Calculation	97
	Conclusion	101
6	Organisation and Economic Part.....	102
6.1	Basic Data.....	102
6.2	Technical Task.....	102
6.3	SP Development Self-Cost Estimation.....	104
6.3.1	Design Works Labour Content Planning	104
6.3.2	Evaluation of Executives Number and Character.....	106
6.3.3	Project Time Schedule	107
6.3.4	Labour Costs Estimation.....	108
6.3.5	Design Costs Estimation	112
6.4	Price Planning and Profit Forecasting	115
6.5	Investment Project Efficiency Estimation.....	117
6.6	Market Analysis.....	121
	Conclusion	122
	Summary	123
	List of References	124

LIST OF ABBREVIATIONS

AWS	–	automated working station
VDT	–	video-display terminal
SW	–	software
SP	–	software product
DCN	–	distributed computer network
